

Centrifuging now available to mid-sized cellars

Separator Technology Solutions, supplier of the market-leading STS 200 high-performance centrifuge recently announced that Wintrust and Materiel Pera have been appointed as their agents for South Africa, Europe and South America.

Mid-Sized & premium cellars can now also consider the new STS 45, delivering a yield of first quality juices & wines with an outrageously strong business case, until now the exclusive domain of large cellar operations.

The STS System has developed additional applications including carbon juice lees, as well as red juice ex thermo-vinification at exceptional capacity and flexibility.

To support the South African wine industry, STS and Wintrust:

- Opened a service and repair facility in Strand.
- Appointed Charlie Solms as STS Service Manager and
- Beauton Bavides as training and optimisation manager.

The STS System is now operational at Distell's super-premium cellars, Bergkelder and Nederberg, as well as Namaqua's Spruitdrift cellar, Lutzville Cape Diamond, Wellington, Overhex and Simonsvlei wineries.

Wintrust also continues to represent market-leading suppliers Pera, Eurodia and Rohapect.
